

WILSONART WOODGRAINS™

Explore Plain Sliced Bookmatch Designs

Typical HPL Woodgrains: HPL is ideal for maximizing yield per sheet, often utilizing balanced or random layouts of printed woodgrain. Notice the overall consistency and potential absence of a distinct, mirrored pattern across the surface.

The PB series is created with sequenced leaves, mirrored to maximize design and create a sense of harmony and visual interest perfect for large surface applications.

Our 16 stunning plain sliced bookmatch (PB) woodgrains perfectly replicate the natural character of hand-selected flitches for high-grade white oak, walnut, maple, and cherry woodgrains with zero pattern repetition.

Unlike wood veneer, each design is engineered for consistent color and detail, offering limitless potential for large-scale layouts that require an elevated, uninterrupted style.

Our PB woodgrains are a low-maintenance, cost-effective, and eco-friendly alternative to real wood veneer. They are designed for high-uses areas and large-scale layouts that require elevated, uninterrupted style. Get superior performance over wood veneer in durability, delivery, and installation.
