

WILSONART WOODGRAINS®

Explore No-Repeat Plain Sliced Bookmatch Designs

Typical HPL Woodgrains: HPL is ideal for maximizing yield per sheet, often utilizing balanced or random layouts of printed woodgrain. Notice the overall consistency and potential absence of a distinct, mirrored pattern across the surface.

The PB Series is created with sequenced leaves, mirrored to maximize design and create a sense of harmony and visual interest perfect for large surface applications.

Our 16 stunning PB Series woodgrains perfectly replicate the natural character of hand-selected leaves for high-grade white oak, walnut, maple, and cherry woodgrains with zero pattern repetition.

- An exclusive selection of woodgrains uniquely designed for large-scale applications
- No repeats across full 5'x12' or 4'x8' sheets (Ideal for wall panels, tabletops, and doors)
- Scanned hand selected 12" leaves (2x wider than average AA-grade veneer leaf)
- Best-match coordinated surfaces on the market (HPL, TFL, and Edgeband)

Our PB Series woodgrains are a low-maintenance, cost-effective, and eco-friendly alternative to real wood veneer. They are designed with consistent color and detail for high-use areas and large-scale applications that require elevated, uninterrupted style. Get superior performance over wood veneer in durability, delivery, and installation.

When fortified by AEON™ Technology, our designs outperform wood veneer with everyday durability. Keep exploring at wilsonart.com/aeon

Explore No-Repeat Plain Sliced Bookmatch Designs

Discover beauty that can't be repeated. To create these no-repeat woodgrains, we scanned and replicated real wood veneer to guarantee that every inch is unique.

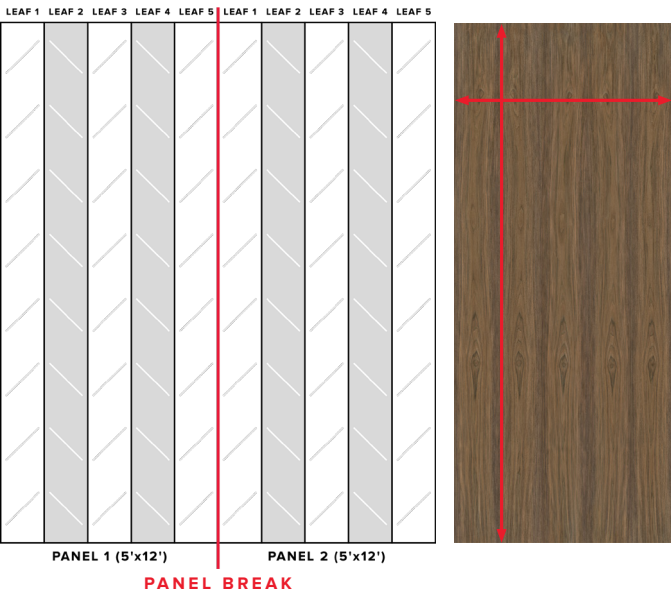

4'X8' PANELS

When the 4'x8' sheets are placed next to each other, these panels create a continuous bookmatch pattern.

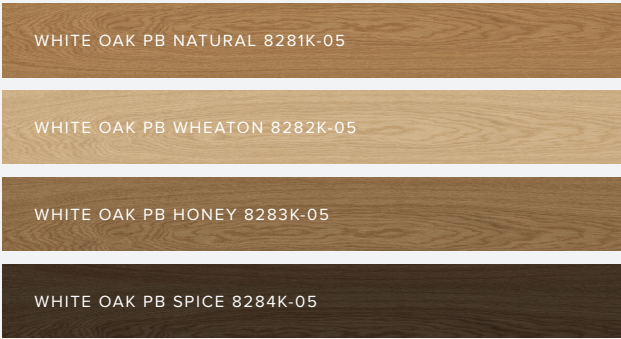

5'X12' PANELS

When the 5'x12' sheets are placed next to each other, these panels create a “slip match” pattern. A slip match means the leaves across the panel seam will not be mirrored, interrupting the continuous bookmatch look.

When placing a 4x8 no-repeat woodgrain next to a 5x12, the woodgrain is scaled differently, so the features won't line up. TFL Panels are cut to length so the feature locations can change from sheet to sheet.
